

Wireless extension for iPod Mini

Product number: AK13E

Benefits

Enjoy your iPod Music, even at home, on your high quality stereo, without any wire.

The kit is very easy to install : Just plug the jack of the transmitter into the headphone jack of your iPod.

Connect the audio out jacks of the receiver to the AUX input of your stereo system. Connect the power jack to the AC/DC adaptor and plug it into a standard 230 volts socket. Flip up the 863 MHz antenna.

You can enjoy your iPod music non-stop: the receiver can charge a spare battery when its AC/DC adaptor is connected to a 230VAC outlet. As soon as the battery in the Transmitter goes flat, you can swap it for the one in the Receiver.

Components

- Transmitter Unit (AT13E)
- Receiver Unit (AR13E)
- 1 AC/DC adaptor
- 2 rechargeable batteries
- Cable RCA/Jack 3,5 mm
