

Mini-Motion Security System

Product number : SC14E

Benefits

All that you need to protect small apartments or studios. Simple to install and also discrete but attractive, the console integrates all the functions needed to make your apartment safe even when you are at home. Just press the panic button on the keyfob to call for help.

If a burglar tries to break-in, the telephone dialler will call to bring help. When you are away, knowing that your home is being looked after 24 hours - is real peace of mind.

Even when you are at home, you can have additional security with the panic function, provided by the optional key fob KR21E. The KR21E keyfob also lets you arm and disarm the system.

For extended protection, additional security detectors can be connected to the motion security system (optional connection jack). For example, a door/window contact may be installed on the front door and wired to the system, giving you 2 points of security protection.
