 - Status check by telephone
 - ARM & DISARM by telephone, built-in key pad or remote control
 - 2 security messages - alarm and system fault

Benefits

The Maxi Controller is the first affordable home automation controller combining the essential functions of home automation :

- Fully supervised 32 zone security system that gives you the power to protect your home whether you are at home or away, complete with built-in «prevention features» that make a house look lived-in and alarm dial-out in the event of an alarm.
- Centralized control always ensures you know the status of your home. (This feature can be coupled with the X10 ActiveHome to provide macro status control.)
- Remote control from anywhere in the world with the capability to know the status of your security system, or to arm it or disarm it, for letting in your friends or the housekeeper. (No need to give away your PIN code.)
- Upgradeability to control 16 macros or zones with any number of appliances
- Use the Thermostat module to control your heating / cooling systems and save money and energy

The Maxi Controller is the best way to start enjoying the benefits of home automation without the risk that your system will not grow with your growing needs, nor the risk that your system will become out-of-date. X10 home automation is upgradeable with built-in compatibility. Products installed 20 years ago still function with our latest equipment.
