

XRay Vision and USB converter kit

Product number : XRay Vision

Key Features

- Connect any Xcam to your PC.
- Transmit live colour video to your PC.
- View images directly over the web.
- No additional PC hardware required - plugs into your USB port.

Benefits

All the benefits of X10's XCam2 wireless camera, the XRay Vision kit is provided with an easy to install USB converter to connect the camera to your PC. With such a configuration, you can begin to imagine the possibilities. The XRay Vision software has been designed to give the user maximum use of his digital images and without the need of other hardware.

1. Save the images to your database with several user definable preferences - based on fixed times, delay, motion or when you ask it.
2. Send the images to your choice of ISP or e-mail address with your defined preference.
3. Connect to your camera remotely through Xray Vision Viewer.
4. Connect several cameras (up to 16) and scan locally and remotely.
5. View exactly what your XCam2 sees on any remote PC. Control the frequency of image capture from every 10 seconds to every 2 minutes.
6. Download images remotely from your PC or from the Online Imagebase.
7. Have XRay Vision automatically e-mail the most recent image at any interval you choose — from 1 minute to 3 hours.
8. Based on your settings, XRay Vision will recognize and highlight images where motion occurs — even automatically send you an e-mail of that frame.
9. You remotely activate XRay Vision to automatically connect to your ISP, e-mail an image, or upload an image for later remote viewing.

Applications

Monitor your business from home

Let GrandMa watch the kids over the internet
